

PlatformPro Framework

R E A D M E

Hello! Thanks for purchasing PlatformPro from PageLines.

To Install:

1. There are two ways to install a new theme into WP.
 - Use the native theme uploader in WordPress. (Under: "appearance" > "Themes" > "Upload")
 - Upload through FTP. To do this, unzip the theme on your desktop and upload to your themes folder within WordPress.
2. Activate the theme under "appearance" > "themes".
3. Note: We make our demo content available in the docs (www.pagelines.com/docs/).

To upgrade to newest version:

4. You may want to back your site up (just to be safe)
5. Rename the new theme (for example "PlatformProNew") and upload to themes folder
6. Visit WP Admin and switch theme to new version
7. There is no need to replace plugins, but you may want to add newly supported plugins

Support:

PageLines offers support through its forum and theme document. Find them here:

- PageLines Forum — www.pagelines.com/forum
- PageLines Docs — www.pagelines.com/docs

Best of luck with your new site!

Sincerely,

the PageLines Team
