LABOUR TIME SCHEDULE

This labour time schedule is compiled to assist Lotus Dealers when submitting warranty claims via the warranty dealer connect system and also when estimating job times.

The manual is arranged in 'component code' order in common with the Service Parts List, and allocates an operation code to each of the principal operations, with a corresponding labour time

Component Code

For the purposes of part identification, the components of the vehicle are split into function groups, such as front suspension, glazing, etc., and allocated a 'component code', as listed in the index pages, and is in common with the Service Parts List. The first two digits of the function code refer to the major function group, the second two digits to a medium, and the third pair of digits to a specific part. The six figure group identifies a particular component, and is the 'component code'. If the particular part is not listed, then please contact the warranty department for prior authorisation. Please see criteria for pre authorisation from the policy and procedures manual.

Failure Codes

The failure codes consist of A and B codes, and is entered onto the warranty claim. The A code denotes the fault with the applicable component, and the B code denotes the symptoms that led up to discovering the component fault. A full list of A and B types are at the beginning of the labour time schedule.

Operation Code

An operation code is used to identify the type of operation that has been applied to the component, and the subsequent labour time allowance, and is entered onto the warranty claim. The operation codes consist of the six digit component code in conjunction with a two digit work code, These work codes include:

- 00 Test / adjust
- 01 Remove and Refit (R & R)
- 02 Renew
- 03 Renew including paint
- 04 Overhaul
- 05 Renew - unit out of car
- 06 Retrofit
- 07 Modify

Unless otherwise stated the operation codes listed are 'stand alone' times. Only where reference is made to another operation code, i.e. (gearbox removed) should multiple operation times be claimed for.

Labour Time

The times listed against each of the operations are those required by a suitably skilled technician provided with appropriate facilities and special tools (when applicable) working at normal speed and using procedures detailed in the Service Notes manual. The decimal clock system is split into 100 minutes so that the resultant labour time can be calculated through your labour rate in order to obtain a monetary value.

Example: 15 minutes=0.25
1/2 hour =0.50
3/4 hour =0.75
1 hour =1.00

Suggested Labour Time Changes

Forms are provided at the back of the book for use by the dealers if a listed labour time is considered to be incorrect. When using this form, the exact work procedure should be detailed, together with the reasoning and other factors to enable the report to be accurately analysed.

Diagnosis and Testing

As a general rule, diagnosis and testing both before and after an operation should be considered an operating expence and are not reclaimable under warranty unless prior authority has been granted.
